

17. When you release it, the ball would go in the direction it was about to. This is centripetal force which means that it is any force that keeps an object moving in a circle.

Newton's Law - 2

18. You should always wear a seatbelt in the car because, if you don't, you will hit your head on the windshield. When you do wear your seatbelt, you won't get hurt in an accident because your seatbelt will stop you.

The objects in the car will always go in the same direction the car is going.
